Subject: Microsoft is right!

Microsoft is wholly in the right, and the Justice Department is wholly in the wrong. Microsoft benefits the nation, the government regulations of business harm the nation. But that is not the justification for Microsoft's right to exercise its own judgement in producing and marketing its products. The justification is the same as for my right to live my own life by my judgement. Them that don't like me can leave me alone. Success in a free market legal system is not an act of aggression -- it is a badge of honor.
